

KR Series

Sloped Ceiling Adaptor Accessories for KR4™ and KR6™ Round Architectural Downlights

Product Description

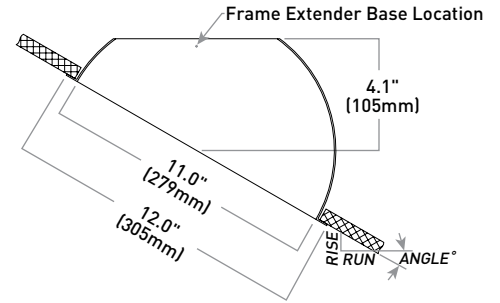

The KR6™ and KR4™ Sloped Ceiling Adaptor accessory is a secondary domed reflector that allows the KR series round downlights to be mounted parallel to the floor to ease installation and allow the light to be reflected at an angle equal to the ceiling slope. This adaptor reflector converts the primary vertical throw to an angled throw for applications with large slope ceilings making it suitable for spaces with vaulted ceilings or accent walls.
